**Rowan Digital Infrastructure**

# COMMITTED TO ENVIRONMENTAL STEWARDSHIP

*Project Percheron | Boardman, Oregon*

## *Together, we can redefine digital infrastructure development in this region of Oregon to prioritize responsible stewardship.*

Rowan develops strategically located green data centers to host next-generation, mission critical, hyperscale data centers. We partner with data center operators that have accelerated carbon reduction and "net zero" targets and that are committed to supporting their operations from 100% renewable energy.  We have kept the environment at the forefront of our planning and project development work by commissioning third-party studies, habitat evaluations, and thorough agency consultations to directly inform a thoughtful site plan that has the least impact on the environment.

| ENVIRONMENTAL STUDIES | <ul><li>Wetlands, riparian, and floodplain</li><li>Washington Ground Squirrels Field Survey</li><li>Threatened and Endangered Species Habitat Assessment</li><li>Big Game Habitat Assessment</li><li>Soils Analysis</li><li>Phase one environmental site assessment (ESA)</li><li>Geotechnical investigation</li></ul> |
|---|---|
| AGENCY CONSULTATIONS | <ul><li>Oregon Department of State Lands</li><li>Oregon Department of Fish and Wildlife</li><li>Morrow Soil and Water Conservation District</li><li>Oregon Department of Land Conservation and Development</li></ul> |
| MEASURES TO AVOID ENVIRONMENTAL IMPACTS | <ul><li>Avoid wetlands and riparian areas</li><li>Avoid floodplain</li><li>Avoid County Goal 5 and ODFW mapped areas for big game winter range</li><li>250-foot buffer from Boardman Conservation Area</li><li>100-foot buffer from wetland and other riparian areas</li><li>Onsite management of stormwater and wastewater</li></ul> |

**rowan** digital infrastructure

Rowan Green Data LLC was established in November 2020 to offer powered infrastructure-as-a-service solutions for next-generation, mission critical, hyperscale data centers in the United States, and to help hyperscale data center operators in meeting their accelerating carbon reduction and "net zero" targets.
